 AgentScope — AI Evaluation & Advanced Tracing Platform

1. Professional Dashboard Layout

Modern AI monitoring platform design

Responsive sidebar navigation

Mobile-friendly menu

Active agent status

Last updated timestamp

2. Evaluation Center

The platform evaluates the AI agent using measurable criteria:

Accuracy

Task Completion

Groundedness

Reliability

Robustness

Evidence Quality

Overall Agent Score

3. Performance Visualization

Performance progress bars

Percentage-based scores

Overall score out of 100

Pass/Review status

Scenario count

4. Granular AI Metrics

Additional detailed measurements:

Hallucination Rate

Recovery Rate

Consistency

Average Latency

Tool Efficiency

Unsupported Conclusion Refusal

5. Adversarial & Stress Testing

The AI agent is tested in 8 different scenarios:

Normal Scenario

Ambiguous Query

Adversarial Input

Contradictory Evidence

Incomplete Information

Tool Failure

Repeated Runs

Baseline Comparison

Each scenario displays:

Scenario name

Score

Description

Agent behavior/result

6. Automated Evaluation

Run Full Evaluation button:

Starts evaluation automatically

Shows live progress

Tests different conditions

Generates updated scores

Calculates the overall score

Updates evaluation status

Creates a new run in Run History

7. 🚦 Agent Decision System

The system can demonstrate three AI decision states:

🟢 Evidence Sufficient → Answer confidently

🟡 Uncertainty Detected → Explain limitations

🔴 Evidence Insufficient → Refuse unsupported conclusions

This demonstrates responsible AI behavior.

8. 🔄 Failure Recovery Pipeline

The website shows how an agent handles failures:

Research Tool Fails

↓

Detect Failure

↓

Retry / Alternative Source

↓

Verify New Evidence

↓

Recover Successfully

↓

Update Audit Trail

Users can click each step to view its explanation.

9. 📄 Run History

Tracks previous evaluations with:

Run ID

Scenario

Score

Decision

Status

Also includes a Search Runs feature.

10. Export Evaluation Report

Users can export the current evaluation results into a report containing:

Overall Score

Accuracy

Task Completion

Groundedness

Reliability

Robustness

Evidence Quality

Report generation date and time

11. Advanced End-to-End Tracing

The tracing system monitors:

Agent activity

Prompts

Decisions

Tool calls

Latency

Token usage

Errors

Recovery actions

Final task completion

12. ⚡ Controlled Failure Lab

A special interactive feature demonstrating AI failure handling.

The process is:

1. Inject Failure

Simulates an external API timeout.

2. Diagnose Root Cause

Analyzes the trace and identifies the reason for failure.

3. Recover & Improve

Uses a fallback strategy and optimizes execution.

13. 🔍 Root Cause Analysis

When a failure occurs, the system identifies:

Which agent/tool failed

Type of error

Timeout information

Configured threshold issue

Root cause of the failure

14. 🛠️ Automatic Recovery

After diagnosis, the agent:

Applies an alternative source

Changes the retry strategy

Reduces unnecessary tool calls

Recovers the failed task

Completes execution successfully

15. 📊 Before vs After Improvements

The platform demonstrates measurable improvements.

Before Optimization:

Latency: 3.8s

Tool Calls: 14

Errors: 4

Task Success: 78%

After Recovery & Optimization:

Latency: 2.1s

Tool Calls: 8

Errors: 1

Task Success: 96%

16. 📄 End-to-End Trace Timeline

Every important event is recorded in sequence, such as:

Prompt Received → Strategy Selected → Tool Called → Error Occurred → Root Cause Diagnosed → Fallback Applied → Task Recovered

Each trace displays:

Agent name

Action

Event type

Latency

Token usage

Success/error status

17. 📱 Responsive Design

The website works on:

💻 Laptop

🖥️ Desktop

 Mobile

 Tablet

 Main Purpose of Your Website

AgentScope is an AI Agent Monitoring, Evaluation, and Observability Platform designed to test whether an AI agent is accurate, reliable, robust, evidence-grounded, efficient, and capable of recovering from failures. It evaluates agents under normal and difficult scenarios while providing complete tracing of prompts, decisions, tools, latency, tokens, errors, root causes, and performance improvements.
