

ADVANCED OBSERVABILITY

AGENT TRACING

See how every decision happens — prompts, tools, latency, tokens, and failures, start to finish.

CONTROLLED FAILURE LAB

**Break it. Trace it.
Improve it.**

Introduce a controlled tool failure and let the agent identify the root cause, diagnose the problem, and automatically recover.

Edit with  Lovable

1. Inject Failure

Simulate an external API timeout.

2. Diagnose Root Cause

Analyze traces and identify failure.

3. Recover & Improve

Apply fallback and optimize execution.

END-TO-END TRACE

3 events

Every step leaves a receipt
